ATM PIN CHECK, IF MORE THAN 3 ATTEMPTS BLOCK ACCESS OF THE USER:

In [4]:
```python
## ATM Pin Check, if more than 3 attempts block access of the user:

Current_Balance = 75000
pin = 6295

key_1 = int(input("Enter the 4 digit pin"))

if pin == key_1:
    print("Your Current Balance is",Current_Balance)
    print("Thankyou for choosing us!")
    exit()
else:
    print("Incorrect pin, 2 more attempts left")
    print("                                    ")

key_2 = int(input("Enter the 4 digit pin"))
if pin == key_2:
    print("Your Current Balance is",Current_Balance)
    exit()
else:
    print("Incorrect pin, 1 more attempt left")
    print("                                   ")

key_3 = int(input("Enter the 4 digit pin"))
if pin == key_3:
    print("Your Current Balance is",Current_Balance)
    exit()
else:
    print("Incorrect pin, 0 attempts left")
    print("ACCESS DENIED!")
```

```
Incorrect pin, 2 more attempts left

Incorrect pin, 1 more attempt left

Incorrect pin, 0 attempts left
ACCESS DENIED!
```
